### **Instruction Manual**

#### 1. Introduction

**KeyTec® TR-FRET mAb anti-GST-LA** is designed for developing the TR-FRET Assay. The anti-GST antibody is a mouse monoclonal antibody. In the Protein-Protein Interaction assay, one GST-tagged protein binds to the acceptor (KeyTec® TR-FRET mAb anti-GST-LA<sup>\*1</sup>), and the other protein is labeled (directly or indirectly) with the donor (KeyTec® TR-FRET Eu/Tb<sup>\*2</sup>). When the two proteins interact, the donor molecule is brought into proximity with the acceptor molecule. Excitation of the donor will result in the generation of the TR-FRET signal at 665 nm, proportional to the extent of protein interaction.

### 4.2 Reagents Handling

#### 1) Buffers

- KeyTec® TR-FRET Solar Eu/Tb Detection Buffer (A1010002L/A1010003L) has been optimized for maximum performance.
- Use the same buffer to prepare both the donor (Eu/Tb) and the acceptor conjugates.
- KeyTec® TR-FRET Binding Assay Diluent Buffer (A1010001L) is recommended for dilution and preparation of other assay components.
- If using a homemade buffer solution, avoid SDS addition.

#### 2) Conjugates

- Before reconstitution: Please equilibrate the reagent to room temperature and ensure that the stock solution
  and working solution are prepared according to the instructions for the product you purchased.
- Reconstitute the KeyTec® TR-FRET mAb anti-GST-LA, Lyophilized, with ddH<sub>2</sub>O: Centrifuge the vial at 850 × g for 1-2 minutes before opening the cap. Add ddH<sub>2</sub>O as indicated on the label; this will yield a 100X stock solution with a molar concentration of 4 μM. Gently tap or invert the vial to ensure thorough dissolution of the lyophilized powder, avoiding vortex shaking. Allow the standard to sit at room temperature for more than 15 minutes to ensure complete dissolution.
- **Prepare working solutions** as per the purchased product instructions. The stock solution for KeyTec® TR-FRET mAb anti-GST-LA is 100X; dilute 100 times for a 1X working solution. For example, mix 50 μL of the stock solution with 4950 μL of KeyTec® TR-FRET Solar Eu Detection Buffer for a 1X working solution.
- Optimal amounts per well can be further optimized based on different assay format and conditions.

### 4.3 Data Calculating

Calculate the ratio of 665 nm/615 nm (TR-FRET Ratio) and the CV for each individual well.
